

Cell-Rejuv[®]

Cell-Rejuv[®] is a unique liquid that has the ability to cause the release of both nascent oxygen (O) and nascent hydrogen (H) from the water molecule (H₂O). When this release occurs, more hydrogen and oxygen are provided to each tissue of the body through the blood stream. These elements act as antioxidants in the body and serve to help clean up free radicals. Cell-Rejuv[®] also supports the Circulatory System which eliminates toxins from the body such as lactic acid and carbon monoxide which have built up in the tissues and blood stream from the incomplete burn of sugar. Oxygen also provides energy for the body since the body requires Oxygen to burn sugar for energy but when there is not enough oxygen present, the burn is incomplete and waste materials are formed. Cell-Rejuv[®] also serves as an important source of amino acids, minerals and enzymes.

It is primarily deuterium sulfate technology that is responsible for the amazing properties of Cell-Rejuv[®]. The base technology used in Cell-Rejuv[®] was originally created in 1949 by Lee "Teddy" Reynolds near Denver, Colorado. This technology was then passed on to one of his distributors who further improved his product by adding to it the biological component which consisted adding 34 enzymes, 17 amino acids and 78 ionic minerals. The other 3 primary components of the product include chemical, physical, and electrical properties.

Today, Healthy Habits[®] has taken Lee Reynolds' deuterium sulfate technology to the next level. Instead of using ordinary purified or distilled water to make deuterium sulfate, Healthy Habits[®] uses a proprietary, highly energized, water that is already rich in free hydrogen and oxygen ions to make our product. By using energized water to make deuterium sulfate, a much more potent "Super Cell" product is the result. The biological component is still present. Use of this optimized, potentiated product translates into improved benefits and function in the body.

This improved product today emerges as Cell-Rejuv[®], a multi-dimensional, super energized, life energizing liquid. It is advanced nutritional technology at it's very best. The Di-base, Di-pole Deuterium Sulfate combined with energized water provides an incredible oxygen & hydrogen source and delivery system to all of the cells of the body. According to Dr. Stephen Levine, "Hypoxia, or the lack of oxygen in the tissues, is the fundamental cause of all degenerative diseases." Cell-Rejuv[®] mixed with water, juice or your favorite energy drink, generates more oxygen & hydrogen for every cell of your body. Because of this unique property, Cell-Rejuv[®] supports your body's ability to achieve optimum health and longevity.

Only the finest ingredients are selected when making Cell-Rejuv[®]. The elements contained in Cell-Rejuv[®] are all obtained from clean, natural sources and are comprised of purified energized water, 86 major and trace elements, 18 amino acids and 34 enzymes.

Cell-Rejuv[®] stands alone in its superior ability to release both hydrogen and oxygen from the water molecule. This release of hydrogen and oxygen from the water molecule occurs slowly over a period of time and only requires a small amount of the water which is available at any one time. Some of the benefits of a mineral-rich and oxygen-rich diet include: high energy levels; better assimilation and utilization of the food we eat and the supplements we consume; and the creation of enzymes that are necessary for vitamins to function, increasing their effectiveness four to five times in the body. When a body is deficient in oxygen, hydrogen, trace minerals, enzymes, amino acids and water, it does not have the ability to repair and maintain itself. It is said to be in a state of disease (dis-ease). Since the elements in Cell-Rejuv[®] are suspended in liquid form and are broken down into an ionic state, they are absorbed at a much greater rate than the same elements in a tablet form.

Many scientists agree that the cause of degenerative disease is caused by a lack of oxygen in the blood stream, organs and other body tissues.

- Cell-Rejuv[®] helps to create more oxygen by its release from the water molecule. This extra oxygen actually supports your body's ability to achieve optimum health & longevity.

- Cell-Rejuv[®] contains minerals which are very highly energized and are in the form that the body most easily recognizes and utilizes.
- Cell-Rejuv[®] supports the Circulatory System which cleans the blood stream. An optimal Circulatory System will increase the effectiveness of vitamins, herbs and nutrients by four to five times.
- Cell-Rejuv[®] releases oxygen from water. Oxygen is known to inhibit infectious bacteria, viruses, fungi, and parasites.
- Add 3 drops of Cell-Rejuv[®] per pint to purify uncertain water and remove the bad taste. In earthquake areas, Cell-Rejuv[®] should be kept available to assure that water which has been stored for several months can be purified (*Note: It is suggested that Cell-Rejuv[®] be added just before water is to be used.*)
- Dark field microscope studies of people taking Cell-Rejuv[®] show that within 15 minutes of ingestion, most of the patient's blood cells appeared cleaner and more free flowing.
- Cell-Rejuv[®] has no side effects, is non-toxic and can be taken by children and adults.
- Cell-Rejuv[®] is a powerful free radical scavenger.
- Cell-Rejuv[®] supports nutrient absorption and supports waste elimination. Cell-Rejuv[®] supports the absorption of nutrients from the foods and supplements that we consume. The primary reason for improved nutrient absorption is support of the Circulatory System. When the Circulatory System operates optimally, toxin removal, nutrient delivery and oxygen delivery are improved.
- Cell-Rejuv[®] supports well being. When oxygen levels are low, sugar is not burnt as efficiently. This creates a build up of toxic wastes in the body and energy levels slump. With the increased oxygen support that Cell-Rejuv[®] imparts, the gradual and significant detoxification of cellular wastes is supported. This support allows the body's ability to function in a clean and efficient manner. When the body functions at optimal levels, energy levels are increased over time. Cell-Rejuv[®] also supports the Digestive, Nervous and Endocrine Systems which all contribute to an overall increase in energy and decreased sleep requirements.
- Cell-Rejuv[®] supports the removal of toxins from the blood, organs and tissues. When Cell-Rejuv[®] is taken, oxygen levels are increased. This supports the Circulatory System. The Circulatory System removes the toxic sludge in our bodies and sugar is burnt more completely as this process continues. The net result of an optimal Circulatory System is an increase of energy in the body. As the energy potential in the body is increased, there is an increase of the metabolism of waste material out of the body. If too much waste is metabolized at one time, this can result in detoxification symptoms -- such as headaches, achiness, skin eruptions, and the reoccurrence of past symptoms. During this time of detoxification it is especially important to keep the eliminative channels of the body from becoming congested.

- Cell-Rejuv[®] supports increased Hydrogen and Oxygen in our bodies. The elements Hydrogen and Oxygen provide for both catabolic and anabolic reactions in the body. Through the release of both of these elements from water Cell-Rejuv[®] is able to help bring the body back into balance when there is an anabolic or catabolic imbalance. Of course, when the body is in anabolic and catabolic balance a healing response is more easily achieved.
- Cell-Rejuv[®] is a fabulous water treatment. Deuterium Sulfate was first developed in 1956 to make potable water for the military. The powerful bacteriostatic and flocculating effects of Cell-Rejuv[®] can be witnessed by adding three drops of Cell-Rejuv[®] to a pint of water and setting the mixture aside for four to eight hours. The result is potable water.
- Plants, cut flowers and pets flourish with **Cell-Rejuv[®]** . This is great! Try it on your house plants or some cut flowers or maybe put it in your pet's water and see what happens. Many people have reported that their pets prefer water with Cell-Rejuv[®] in it. I can tell you that my plants flourish with it and my cats love it.
- Cell-Rejuv[®] is absolutely stable. It becomes more potent with age. Sunlight charges it's energy potential. Airport x-ray machines and other electromagnetic influences do not affect Cell-Rejuv[®].
- Cell-Rejuv[®] facilitates extraordinary results. There is no secret behind the value of trace minerals and micronutrients. The secret of the effectiveness of Cell-Rejuv is the physics involved in capturing, combining, and concentrating these elements into one easy-to-take drop in a glass of water. The unique properties of Cell-Rejuv[®] allows it to replenish proper blood levels of these nutrients and enhance the metabolic benefit of other supplements and nutrients, as well as assist in the elimination of toxins and toxic waste materials from the body through circulatory support.

1. Does Cell-Rejuv[®] contain oxygen?

Cell-Rejuv[®] supports the oxygen needs of the body over an extended period of time by releasing oxygen from the water molecule. The release of oxygen begins as soon as Cell-Rejuv[®] is mixed with water. Cell-Rejuv[®] itself only contains small amounts of oxygen.

2. Cell-Rejuv[®] does not taste sour. Does this mean that it is not effective?

The taste of Cell-Rejuv[®] is not a measure of its potency. The sourness, acidity or the lemon taste is not a measure of how effective any deuterium sulfate product is. In fact, it has been noted that when premium ingredients are used and when deuterium sulfate is activated with light, that the taste is smoother and less acidic tasting. Premium ingredients and light activation also cause a significant increase in the potency of deuterium sulfate. Such is the case with Cell-Rejuv[®] .

3. Is Cell-Rejuv[®] FDA approved?

Cell-Rejuv[®] is a nutritional supplement and not a drug so it does not require FDA approval. Cell-Rejuv[®] does not treat, cure or prevent any disease.

4. How does Cell-Rejuv[®] heal the body?

The human body is a miraculous creation. We believe that when given the proper elements, that it is capable of healing itself. Cell-Rejuv[®] does not treat or cure any disease but does provide many of the raw elements that are required for life.

5. Mixing with refrigerated water, open or closed container?

In an open container left out, the solution will have a tendency to draw moisture from the atmosphere and actually weaken the solution. We suggest that it not be left in an open container for more than a few hours. Refrigeration is not required. In flood zones or bad weather areas, where water storage is common, keep emergency Cell-Rejuv[®] available near the water to remove bad odors and taste. (Note: It is suggested that Cell-Rejuv[®] not be added until ready to use).

6. Can Cell-Rejuv[®] be used topically?

Cell-Rejuv[®] is a dietary supplement and is not intended for use as a topical treatment.

7. What is the difference between aerobic and anaerobic?

AEROBIC - Able to grow or thrive only when free oxygen is present.

ANAEROBIC - Able to grow and thrive only when free oxygen is not present.

8. What About Product Storage?

Cell-Rejuv[®] only gets better with time. Freezing can cause the minerals to fall out of solution, but simple shaking the bottle will normally bring the minerals right back into solution. Freezing could damage the container and should be avoided if possible. Extreme heat and close proximity to microwave ovens should also be avoided.

9. Should Cell-Rejuv[®] be mixed with refrigerated water?

Once Cell-Rejuv[®] has been mixed with water, refrigeration is not necessary but will not hurt the product. Cell-Rejuv[®] can be mixed with either hot or cold liquids including various juices. We recommend using purified water to mix Cell-Rejuv with although many people prefer to mix it with juice to completely disguise the slight lemon like taste of Cell-Rejuv[®]. Since Oxygen is released from water as soon as Cell-Rejuv[®] is mixed with water or juice, we suggest that Cell-Rejuv[®] not be added until it is ready to use. If Cell-Rejuv[®] is being used to help purify water, we recommend that it be added 1-hour prior to use.

10. Can I Use Cell-Rejuv[®] on plants?

Certainly. It is highly recommended for all soil. It has the following soil benefits:

- Reduces Soil Salts
- Normalizes Clay, Hardpan & Caliche
- Aerates & Hydrates Soil
- Neutralizes pH

Directions for soil use:

GARDENS & LAWNS DEEP TREATMENT: Use 1 gallon Cell-Rejuv[®] mixed with 20 gallons of water and spray onto lawn. Rinse grass immediately. Water for 3-5 days in AM & PM. 1 gallon treats up to 1600 sq. ft. As an alternative, hose end sprayer can be used set at 6 oz and sprayed onto soil surfaces. Reapply annually.

LAWNS SHALLOW TREATMENT: Same as above except mix with 40 gallons water or use hose end sprayer set at 3 oz. 1 gallon treats up to 3200 sq. ft. Reapply annually.

HOUSE PLANTS: Mix 2 tbsp Cell-Rejuv[®] into gallon of water and sprinkle on soil once weekly.

FLOWERS & SHRUBS: Mix 16 oz. Cell-Rejuv[®] with 5 gallons water and apply to soil around flowers & shrubs. Rinse off vegetation and water until puddling occurs. Reapply annually.

TREES: Mix 1 qt. Cell-Rejuv[®] with 5 gallons water and spray onto ground surface area directly beneath top mass of tree. Reapply annually.

Always rinse foliage & water heavily after application. Do not allow to dry on foliage. Treatment is complete after 8 inches of water or rain has been applied.

11. Does everybody get results from Cell-Rejuv[®] ?

Yes! Some people are more sensitive to the nutrients that they ingest than others and will feel an immediate Oxygen energy boost. People that are extremely Oxygen deficient will also get an energy boost. Other people will not feel anything but the product is still working anyway. 11. Can I take Cell-Rejuv[®] before or while playing sports? Cell-Rejuv[®] is completely beneficial and safe for all kinds of athletes. None of the ingredients contained in Cell-Rejuv[®] are harmful in any way. Since Cell-Rejuv[®] supports lactic acid removal and supports the increase of Oxygen levels, many athletes use 25 drops or sometimes just a large "squirt" of Cell-Rejuv before and during sports activities. Cell-Rejuv is also a favorite of mountain climbers who are faced with very low oxygen levels at high altitudes.

Full credit for the deuterium sulfate technology used in Cell-Rejuv[®] is given to Lee Reynolds. There are prominent claims that another man created the technology (and the atom bomb). The man in question was a magazine editor that became a distributor for Lee Reynolds after writing several articles about his technology. We have absolute proof of this.

Healthy Habits[®] has taken the technology of Lee Reynolds to the next level through the use of its proprietary energized water but it was Lee Reynolds who first invented and developed the base technology.

Lee Reynolds lived as a crippled man from close to his birth until his death. He only had about 15% of normal lung capacity. When he was nine months old he was dropped by his mother and developed a frontal curvature of the spine as a result. He was originally from New York. Both of Lee's parents died when he was only 8 years old and he was then cared for by the Artists & Writers Club of Manhattan. His mentors made Lee fight for himself and did not pamper him. The result was a man that was persistent enough and intelligent enough to climb innovative mountains that had never been climbed before.

By 1949 Lee Reynolds had become a missile scientist and lived near Denver, Colorado. He helped to develop the "Artificial Horizon" which gyroscopically enabled airplanes to fly as well upside down as they did right side up. Reynolds was also responsible for developing the unique ear plugs that have been used by almost every military force in the world. Reynolds also developed the Nitrogen Filler for inter-continental ballistic missiles which kept them from going off course due to internal heat melting the control instruments.

We believe that Lee Reynolds's finest accomplishment is the development of deuterium sulfate technology. The possibilities for using this technology for health, soil, sewage and water applications have barely been touched. We see this as a gift to mankind, a gift of Genius, the gift of Lee "Teddy" Reynolds- Genius Inventor.
