

Ion-Stream®

A totally new and easy way to bring antioxidant hydrogen rich water into your life.

We proudly invite you to begin your alkaline lifestyle with the new Ion-Stream®, the latest innovation in a decade of supporting people around the world to regain natural alkaline balance through naturally alkaline super-hydrating antioxidant hydrogen water.

Amazing Water on Tap

The Ion-Stream® delivers water that's identical in molecular form to water produced at world famous healing springs.

As an entry-level home water filter and antioxidant MicroWater® generator, it's hard to beat, especially at less than \$500.

Ultra Simple Operation

Ion-Stream® connects to your faucet, or directly to your cold water pipe. Operation is as simple as turning on your faucet for an unlimited flow of this amazing water. Yes, it can even be connected to your reverse-osmosis system, if you prefer.

The Health Secret you've never heard about: because it's too simple!

Proven Performance

The Ion-Stream® will consistently raise alkalinity (pH) of input water and produce excellent low ORP levels, demonstrating its powerful antioxidant properties for much less cost than electronic ionizers.

Flexibility on Tap

The Ion-Stream® offers a synergistic filter combination of filtration media. Using the latest NSF approved filtration technology, it not only removes the usual contaminants such as sediment, taste, odor, smell, color, volatile organic toxins, pesticides, chloramines and chlorine, but also heavy metals and fluoride.

The purified water is finally energized and mineralized using leading edge bio-ceramic, far-infrared and magnetic technologies. You'll LOVE what this water does for you!

Your First Glass in Minutes

The comprehensive manual provides instructions for a step by step installation that you can easily do yourself. Connecting to the faucet should take only 10 minutes. You may require a plumber to connect the Ion-Stream® to under-sink water lines, if you purchased the under-sink kit.

Green by Design

The Ion-Stream® consumes no power. It is a "green" ionizing-antioxidant water filter system. It also reduces filter costs by using renewable ceramics. When your water flow reduces, simply open the Ion-Stream® and scour-pad away the accumulated sediment on the outside of the ceramic layer with the included scour strip.
